Building Mathematics in the Early Years

The development of the resources in this kit is based on the premise that mathematics is part of everyday life.

Components: *Student books*

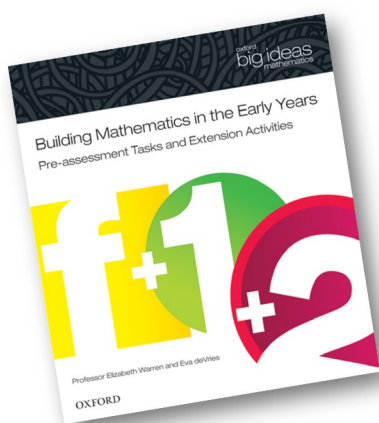

It promotes the development of:

- reading
- visual literacy
- numeracy
- mathematics

The mathematical concepts – linked to the [Australian Curriculum: Mathematics](#) – serve to assist teachers and students to develop an awareness of the mathematical ideas that surround them, and then utilise this world view as a springboard for discussions about Mathematics.

Components: *Professional support*

The Professional Support materials provide teachers with pre-assessment tasks and extension activities linked to each of the activity cards to:

- Increase confidence in teaching mathematics and the use of mathematical language.
- Increase student engagement resulting from the learning experiences.
- Increase teacher expectations of their students in mathematics.
- Change (and improve) understanding of maths concepts and associated pedagogical practices.
